Package: CoxPlus (via r-universe)

October 24, 2026

Type Package

Title Cox Regression (Proportional Hazards Model) with Multiple Causes and Mixed Effects

Version 1.5.7

Date 2025-11-19

Maintainer Jing Peng <jing.peng@uconn.edu>

Description Extends the Cox model to events with more than one causes. Also supports random and fixed effects, tied events, and time-varying variables. Model details are provided in Peng et al. (2018) <doi:10.1509/jmr.14.0643>.

License GPL (>= 3)

Encoding UTF-8

Depends R (>= 3.1.0), Rcpp (>= 0.12.0)

Imports utils, methods, data.table

LinkingTo Rcpp, RcppArmadillo

NeedsCompilation yes

RoxygenNote 7.3.3

CoxPlus *CoxPlus: Cox Regression with Multiple Causes and Mixed Effects*

Description

CoxPlus is a high performance package for estimating Proportional Hazards Models when an event can have more than one cause. It includes support for random and fixed effects, tied events, and time-varying variables.

fastCox *Cox Regression (Proportional Hazards Model) with Multiple Causes and Mixed Effects*

Description

This function estimates Proportional Hazards Model when an even can have more than one causes, including support for random and fixed effects, tied events, and time-varying variables.

Usage

```
fastCox(head, formula, par = list(), data = NULL)
```

Arguments

head	A data frame with 4~5 columns: start, stop, event, weight, strata (optional).
formula	A formula specifying the independent variables
par	A optional list of parameters controlling the estimation process
data	The dataset, a data frame containing observations on the independent variables

Value

A list containing the estimated parameters

Examples

```
# Simulate a dataset. lam=exp(x), suvtime depends on lam
set.seed(123)
x = rnorm(5000)
suvtime = -log(runif(length(x)))/exp(x)
# Censor 80% of events
thd = quantile(suvtime, 0.2)
event = as.numeric(suvtime <= thd)
suvtime[suvtime>thd] = thd

# The estimates of beta should be very close to 1, the true value
head = cbind(start=0,stop=suvtime,event=event,weight=1)
est = fastCox(head,~x)
print(est$result)
```
