#### Abstract

This paper is a guide to the R package GUIDE, short for GUI for DErivatives. The installation of package is described followed by a listing of the menus and depiction of select screenshots.

### 1 Introduction

GUIDE is an acronym for GUI for DErivatives. The package provides neat UIs like calculators for pricing various financial derivatives as well as rich interactive 2D and 3D plots to understand their behavior. It is a useful resource for classroom teaching as well as computer assisted self-learning.

#### 2 Installation

Installation is easy and can be done by calling the command line function

#### > install.packages("GUIDE")

Alternatively, one can also install it from the R console package installation menu. To start using the package, enter

#### > library("GUIDE")

You can also load the package from the console menu. To start using the package, enter

#### > GUIDE()

You should then see the main menu of the package as in Figure 1.

# 3 Menus

GUIDE has 64 functions. A complete list of functions (in menu-wise order) along with a short description is provided in Table 1

Table 1: List of Functions in GUIDE

Forwards  Calculate the forward value of a currency forwardstock bondforwardtreegui fra fra fravalue  Calculate the forward value of a stock Calculate the forward value of a bond using a tree Calculate the forward value of a bond using a tree Calculate the forward rate Calculate the forward rate fravalue  Futures  Calculate the value of a forward rate agreement  Futures  Calculate the value of a currency futures Calculate the value of a currency futures Calculate the value of a currency futures Calculate the value of a stock futures Calculate the value of a stock futures Calculate the value of a currency futures Calculate the value of a bond using a tree Calculate the value of a bond using a tree Calculate the Cash price of a T Bond Futures  Options  Premium3D  stockoptiontreegui bondoptiontreegui bonte private the feitweegue Calculate the feitweegue Plot a Stock	Name of Function	Description

Name of Function	Description	
strip	Profit & Loss plot of strip	
$\operatorname{strap}$	Profit & Loss plot of strap	
	Swaps	
irswapvalue	Calculate the value of an interest rate swap	
$\operatorname{curswapvalue}$	Calculate the value of a fixed-fixed currency swap	
$\operatorname{cdswap}$	Calculate the spread in a credit default swap	
swaptreegui	Plot an interest rate swap tree	
${f swaption treegui}$	Plot an interest rate swaption tree	
Stochastic Processes		
ABMPaths	Simulate and plot Arithmetic Brownian Motion path(s)	
GBMPaths	Simulate and plot Geometric Brownian Motion path(s)	
JDPaths	Simulate and plot Geometric Brownian Motion path(s)  Simulate and plot Jump Diffusion path(s)	
3D1 aons	Difficulties and plot sump Diffusion path(s)	
	Value at Risk	
var1stock	Calculate the value at risk of a single stock	
m var2stocks	Calculate the value at risk of two stocks	
varbehavior	Plot the value at risk as a function of its determinants	
	n l	
	Bonds	
ratetreegui	Plot a interest rate tree	
bondtreegui	Plot a bond price tree	
bondprice	Calculate the price of a bond	
priceyield	Plot the relationship between price and yield of a bond	
pricematurity bonddur	Plot the relationship between price and maturity of a bond Calculate the duration of a bond	
durmaturity	Plot the relationship between duration and maturity of a bond	
durcoupon	Plot the relationship between duration and coupon rate of a bond	
duryield	Plot the relationship between duration and yield of a bond	
bondconv	Calculate the convexity of a bond	
bondchange	Calculate the DV01 based on the duration and convexity	
bondenange	Calculate the D voi based on the duration and convexity	
Utilities		
pv	Calculate the Present value of an amount	
fv	Calculate the Future value of an amount	
pvann	Calculate the Present value of an annuity	
fvann	Calculate the Future value of an annuity	
$\operatorname{rate}$	Calculate rate in the desired frequency	
pval	Calculate the p value for a z value from a normal distribution	
zval	Calculate the z value for a p value from a normal distribution	

Figure 1: The Main menu of GUIDE.

Each of the functions can be accessed from sub menus of the main menu. Sub menu of the Options menu is shown in Figure 2. You can fully explore all the functions through the package's GUI and do not need to write any command on the R console. Figures 3 and 4 show calculators for the Black Scholes price of Options, and the price of Bonds respectively. Each function depicts initial values where user inputs are needed, thereby making it easier for the user to enter inputs in the correct format. For e.g. in Figure 3 (b), the Black Scholes pricer takes the following inputs: i) the spot price ii) the strike price iii) the risk free rate iv) maturity, v) sigma, vii) dividend yield- all of which are text boxes and viii) Type of option, which is a radio button. The documentation provides details of the format for each of the user inputs for each function. Figure 5 shows the relationship between price and yield. Figure 6 shows the behavior of option delta.
