

Package: NGLVieweR (via r-universe)

November 23, 2024

Title Interactive 3D Visualization of Molecular Structures

Version 1.4.0

Maintainer Niels van der Velden <n.s.j.vandervelden@gmail.com>

Description Provides an 'htmlwidgets' <<https://www.htmlwidgets.org/>> interface to 'NGL.js' <<http://nglviewer.org/ngl/api/>>. 'NGLvieweR' can be used to visualize and interact with protein databank ('PDB') and structural files in R and Shiny applications. It includes a set of API functions to manipulate the viewer after creation in Shiny.

License MIT + file LICENSE

Encoding UTF-8

RoxygenNote 7.3.2

Imports htmlwidgets, magrittr, tools, shiny

Suggests knitr, webshot, markdown, rmarkdown, colourpicker

VignetteBuilder knitr

| | |
|-------------------|---------------------------|
| addRepresentation | <i>Add representation</i> |
|-------------------|---------------------------|

Description

Add a representation and its parameters.

Usage

```
addRepresentation(NGLVieweR, type, param = list())
```

Arguments

| | |
|-----------|---|
| NGLVieweR | A NGLVieweR object. |
| type | Type of representation. Most common options are "cartoon", "ball+stick", "line", "surface", "ribbon" and "label". For a full list of options, see the "structureRepresentation" method in the official NGL.js manual. |

param Options for the different types of representations. Most common options are name, opacity, colorScheme, sele, colorValue and visibility. For a full list of options, see the general "RepresentationParameters" method and type specific Label-, Structure- and Surface- RepresentationParameters in the official [NGL.js](#) manual.

Value

List of representation parameters to NGLViewer htmlwidgets object.

See Also

- [addSelection\(\)](#)
- [NGLViewer_example\(\)](#) See example "basic".

Examples

```
NGLViewer("7CID") %>%
  stageParameters(backgroundColor = "black") %>%
  addRepresentation("cartoon",
  param = list(name = "cartoon", colorValue = "blue")) %>%
  addRepresentation("ball+stick",
  param = list(
    name = "ball+stick", sele = "241",
    colorScheme = "element", colorValue = "yellow"
  )
) %>%
addRepresentation("label",
  param = list(
    name = "label",
    showBackground = TRUE,
    labelType = "res",
    color = "black",
    backgroundColor = "white",
    backgroundOpacity = 0.8,
    sele = ":A and 241 and .CG"
  )
)

# Shiny context
if (interactive()) {
  library(shiny)
  ui <- fluidPage(NGLViewerOutput("structure"))
  server <- function(input, output) {
    output$structure <- renderNGLViewer({
      NGLViewer("7CID") %>%
        stageParameters(backgroundColor = "black") %>%
        addRepresentation("cartoon",
          param = list(name = "cartoon", colorValue = "blue")
        ) %>%
        addRepresentation("ball+stick",
          param = list(
```

```

        name = "ball+stick", sele = "241",
        colorScheme = "element"
    )
) %>%
addRepresentation("label",
  param = list(
    name = "label",
    showBackground = TRUE,
    labelType = "res",
    colorValue = "black",
    backgroundColor = "white",
    backgroundOpacity = 0.8,
    sele = ":A and 241 and .CG"
  )
)
})
}
shinyApp(ui, server)
}

```

| | |
|--------------|------------------------|
| addSelection | <i>Add a selection</i> |
|--------------|------------------------|

Description

Add a new selection to a NGLVieweR object in Shiny mode.

Usage

```
addSelection(NGLVieweR_proxy, type, param = list(), structureIndex = NULL)
```

Arguments

| | |
|-----------------|--|
| NGLVieweR_proxy | A NGLVieweR object. |
| type | Type of representation. Most common options are "cartoon", "ball+stick", "surface", "ribbon" and "label". |
| param | Options for the different types of representations. Most common options are name, opacity, colorScheme, sele, colorValue and visibility. For a full list of options, see the general "RepresentationParameters" method and type specific Label-, Structure- and Surface- RepresentationParameters in the official NGL.js manual. |
| structureIndex | (optional) The index of the specific structure to which the selection should be added (index 0 for the first). If not specified, the selection will be applied to all loaded structures. |

Value

API call containing NGLVieweR id and list of message parameters.

See Also

- `updateRepresentation()` Update an existing NGLVieweR representation.
- `NGLViewer_example()` See example "addSelection".

Other selections: `removeSelection()`, `updateSelection()`

Examples

```
## Not run:
NGLViewer_proxy("7CID") %>%
  addSelection("ball+stick", param = list(name="sel1",
                                          sele="1-20",
                                          colorValue="yellow",
                                          colorScheme="element"
                                          ))

## End(Not run)

if (interactive()) {
  library(shiny)

  ui <- fluidPage(
    titlePanel("Viewer with API inputs"),
    sidebarLayout(
      sidebarPanel(
        textInput("selection", "Selection", "1-20"),
        selectInput("type", "Type", c("ball+stick", "cartoon", "backbone")),
        selectInput("color", "Color", c("orange", "grey", "white")),
        actionButton("add", "Add"),
        actionButton("remove", "Remove")
      ),
      mainPanel(
        NGLViewerOutput("structure")
      )
    )
  )
  server <- function(input, output) {
    output$structure <- renderNGLViewer({
      NGLViewer("7CID") %>%
        addRepresentation("cartoon",
                          param = list(name = "cartoon", colorScheme = "residueindex")
        )
    })
    observeEvent(input$add, {
      NGLViewer_proxy("structure") %>%
        addSelection(isolate(input$type),
                     param =
                       list(
                         name = "sel1",
                         sele = isolate(input$selection),
                         colorValue = isolate(input$color)
                       )
        )
    })
  }
}
```

```
    )  
  })  
  
  observeEvent(input$remove, {  
    NGLViewer_proxy("structure") %>%  
    removeSelection("sel1")  
  })  
}  
shinyApp(ui, server)  
}
```

addStructure

Add structure

Description

Add a structure to the NGLViewerR object, either from a PDB entry code, a file, or directly from the R environment.

Usage

```
addStructure(NGLViewerR, data, format = NULL)
```

Arguments

| | |
|------------|--|
| NGLViewerR | A NGLViewerR object. |
| data | Structure data to be added. Can be a PDB entry code (e.g. "7CID"), a file path to a structure file, or a text representation of the structure. |
| format | Format of the structure file, if reading from a file. Supported formats are "pdb", "cif", etc. If the file format cannot be inferred from the file name, this parameter must be specified. |

Details

This function allows you to add a structure to the NGLViewerR widget. You can add the structure using a PDB entry code, by specifying a local file, or by providing the structure data directly. If the format is not clear from the input, you may need to specify it using the format parameter.

Value

An updated NGLViewerR object with the added structure.

Examples

```
NGLVieweR("1CRN") %>%
  addRepresentation("cartoon", param = list(color = "blue")) %>%
  addStructure("1CRN") %>%
  addRepresentation("cartoon", param = list(color = "orange")) %>%
  setPosition(x = 20, y = 0, z = 0) %>%
  setRotation(x = 2, y = 0, z = 0, degrees = FALSE) %>%
  setScale(0.5)

# Note: The first "1CRN" structure is represented in blue, while the second
# "1CRN" structure is represented in orange. Transformations such as
# setPosition, setRotation, and setScale apply to the second
# (most recently added) structure.
```

NGLVieweR

Create a NGLVieweR

Description

NGLVieweR can be used to visualize and interact with Protein Data Bank (PDB) and structural files in R and Shiny applications. It includes a set of API functions to manipulate the viewer after creation in Shiny.

Usage

```
NGLVieweR(data, format = NULL, width = NULL, height = NULL, elementId = NULL)
```

Arguments

| | |
|---------------|---|
| data | PDB file or PDB entry code |
| format | Input format (.mmCIF, .cif, .mcif, .pdb, .ent, .pqr, .gro, .sdf, .sd, .mol2, .mmTF). Needed when no file extension is provided. |
| width, height | Must be a valid CSS unit (like '100%', '400px', 'auto') or a number, which will be coerced to a string and have 'px' appended. |
| elementId | optional element Id |

Details

The package is based on the [NGL.js](#) JavaScript library. To see the full set of features please read the official manual of NGL.js.

Value

A NGLVieweR `htmlwidgets` object.

See Also

- [NGLViewerR_proxy\(\)](#) for handling of API calls after rendering.
- [NGLViewerR_example\(\)](#) See example "API" and "basic".

Examples

```
# Example 1: Most Basic
NGLViewerR("7CID") %>%
  addRepresentation("cartoon",
  param = list(name = "cartoon", colorScheme="residueindex"))

# Example 2: Advanced
NGLViewerR("7CID") %>%
  stageParameters(backgroundColor = "white") %>%
  setQuality("high") %>%
  setSpin(FALSE) %>%
  addRepresentation("cartoon",
    param = list(
      name = "cartoon",
      colorScheme = "residueindex"
    )
  ) %>%
  addRepresentation("ball+stick",
    param = list(
      name = "ball+stick",
      colorValue = "red",
      colorScheme = "element",
      sele = "200"
    )
  ) %>%
  addRepresentation("label",
    param = list(
      name = "label", sele = "200:A.0",
      showBackground = TRUE,
      backgroundColor = "black",
      backgroundMargin = 2,
      backgroundOpacity = 0.5,
      showBorder = TRUE,
      colorValue = "white"
    )
  ) %>%
  addRepresentation("surface",
    param = list(
      name = "surface",
      colorValue = "white",
      opacity = 0.1
    )
  ) %>%
  zoomMove("200", "200", 2000, -20)

#-----Using Shiny-----
```

```

# App 1: Basic Example
if (interactive()) {
  library(shiny)

          name = "sel1",
          sele = isolate(input$selection),
          colorValue = isolate(input$color)
        )
    )
  })

  observeEvent(input$remove, {
    NGLVieweR_proxy("structure") %>%
    removeSelection("sel1")
  })
}
shinyApp(ui, server)
}

```

NGLVieweR-shiny

Shiny bindings for NGLVieweR

Description

Output and render functions for using NGLVieweR within Shiny applications and interactive Rmd documents.

Usage

```
NGLVieweROutput(outputId, width = "100%", height = "400px")
```

```
renderNGLVieweR(expr, env = parent.frame(), quoted = FALSE)
```

```
NGLVieweR_proxy(id, session = shiny::getDefaultReactiveDomain())
```

Arguments

| | |
|---------------|--|
| outputId | output variable to read from |
| width, height | Must be a valid CSS unit (like '100%', '400px', 'auto') or a number, which will be coerced to a string and have 'px' appended. |
| expr | An expression that generates a NGLVieweR. |

| | |
|---------|---|
| env | The environment in which to evaluate expr. |
| quoted | Is expr a quoted expression (with quote())? This is useful if you want to save an expression in a variable. |
| id | single-element character vector indicating the output ID of the chart to modify (if invoked from a Shiny module, the namespace will be added automatically) |
| session | The Shiny session object to which the map belongs; usually the default value will suffice. |

Value

NGLVieweR object that can be placed in the UI.

Examples

```
if (interactive()) {
  library(shiny)

  ui <- fluidPage(
    titlePanel("Viewer with API inputs"),
    sidebarLayout(
      sidebarPanel(
        textInput("selection", "Selection", "1-20"),
        selectInput("type", "Type", c("ball+stick", "cartoon", "backbone")),
        selectInput("color", "Color", c("orange", "grey", "white")),
        actionButton("add", "Add"),
        actionButton("remove", "Remove")
      ),
      mainPanel(
        NGLVieweROutput("structure")
      )
    )
  )
  server <- function(input, output) {
    output$structure <- renderNGLVieweR({
      NGLVieweR("7CID") %>%
        addRepresentation("cartoon",
          param = list(name = "cartoon", color = "residueindex")
        ) %>%
        stageParameters(backgroundColor = input$backgroundColor) %>%
        setQuality("high") %>%
        setFocus(0) %>%
        setSpin(TRUE)
    })
    observeEvent(input$add, {
      NGLVieweR_proxy("structure") %>%
        addSelection(isolate(input$type),
          param =
```

```

        list(
          name = "sel1",
          sele = isolate(input$selection),
          color = isolate(input$color)
        )
      )
    })

    observeEvent(input$remove, {
      NGLVieweR_proxy("structure") %>%
        removeSelection("sel1")
    })
  }
  shinyApp(ui, server)
}

```

NGLVieweR_example

Run NGLVieweR example Shiny app

Description

Launch an example to demonstrate how to use NGLvieweR in Shiny.

Usage

```
NGLVieweR_example(example = "basic")
```

Arguments

| | |
|---------|---|
| example | Example type for which to see an example, possible values are: "basic", "API", "addSelection", "removeSelection", "snapshot", "updateAnimation", "updateColor", "updateFocus", "updateFullscreen", "updateRepresentation", "updateSelection", "updateStage", "updateVisibility", "updateZoomMove", "multiStructureSelection". |
|---------|---|

Value

Call to load Shiny example.

Examples

```

if (interactive()) {

  # Basic example
  NGLVieweR_example("basic")

  # Example with API calls
  NGLVieweR_example("API")
}

```

```
# Function specific example
NGLViewer_example("addSelection")
}
```

| | |
|-----------------|---------------------------|
| removeSelection | <i>Remove a selection</i> |
|-----------------|---------------------------|

Description

Remove an existing NGLViewer selection in Shiny mode.

Usage

```
removeSelection(NGLViewer_proxy, name)
```

Arguments

| | |
|-----------------|----------------------------------|
| NGLViewer_proxy | A NGLViewer object. |
| name | Name of selection to be removed. |

Value

API call containing NGLViewer id and list of message parameters.

See Also

- [NGLViewer_example\(\)](#) See example "removeSelection".

Other selections: [addSelection\(\)](#), [updateSelection\(\)](#)

Examples

```
## Not run:
NGLViewer_proxy("structure") %>%
  removeSelection("sel1")

## End(Not run)

if (interactive()) {
  library(shiny)

  ui <- fluidPage(
    titlePanel("Viewer with API inputs"),
    sidebarLayout(
      sidebarPanel(
        textInput("selection", "Selection", "1-20"),
        selectInput("type", "Type", c("ball+stick", "cartoon", "backbone")),
        selectInput("color", "Color", c("orange", "grey", "white")),
```

```

        actionButton("add", "Add"),
        actionButton("remove", "Remove")
    ),
    mainPanel(
      NGLViewerOutput("structure")
    )
  )
)
server <- function(input, output) {
  output$structure <- renderNGLViewer({
    NGLViewer("7CID") %>%
      addRepresentation("cartoon",
        param = list(name = "cartoon", colorScheme = "residueindex")
      )
  })
  observeEvent(input$add, {
    NGLViewer_proxy("structure") %>%
      addSelection(isolate(input$type),
        param =
          list(
            name = "sel1",
            sele = isolate(input$selection),
            colorValue = isolate(input$color)
          )
      )
  })
  observeEvent(input$remove, {
    NGLViewer_proxy("structure") %>%
      removeSelection("sel1")
  })
}
shinyApp(ui, server)
}

```

selectionParameters *Set selection parameters*

Description

Set selection parameters.

Usage

```
selectionParameters(NGLViewer, proximity = 3, level = "residue")
```

Arguments

NGLViewer A NGLViewer object.

| | |
|-----------|---|
| proximity | Set distance in angstrom for atoms to return in proximity of selection. Default = 3. |
| level | Set level on which atoms in proximity of selection are returned. Options are "residue" (default) or "atom". |

Value

Returns list of selection parameters to NGLViewer htmlwidgets object.

Examples

```

NGLViewer("7CID") %>%
  addRepresentation("cartoon") %>%
  selectionParameters(3, "residue")

# Shiny context
if (interactive()) {
  library(shiny)
  ui <- fluidPage(NGLViewerOutput("structure"))
  server <- function(input, output) {
    output$structure <- renderNGLViewer({
      NGLViewer("7CID") %>%
        addRepresentation("cartoon") %>%
        selectionParameters(3, "residue")
    })
    observeEvent(input$structure_selAround, {
      NGLViewer_proxy("structure") %>% removeSelection("selAround")
      NGLViewer_proxy("structure") %>%
        addSelection(
          "ball+stick",
          param =
            list(
              name = "selAround",
              sele = input$structure_selAround,
              colorValue = "grey"
            )
        )
    })
  }
  shinyApp(ui, server)
}

```

 setFocus

Set Focus

Description

Set Focus

Usage

```
setFocus(NGLVieweR, focus = 0)
```

Arguments

| | |
|-----------|---------------------------------------|
| NGLVieweR | A NGLVieweR object. |
| focus | Set focus between 0 (default) to 100. |

Value

setFocus parameter in NGLVieweR htmlwidgets object.

See Also

[updateFocus\(\)](#)

Other options: [setQuality\(\)](#), [snapShot\(\)](#), [updateFocus\(\)](#), [updateFullscreen\(\)](#)

Examples

```
NGLVieweR("7CID") %>%  
  addRepresentation("cartoon",  
  param=list(name="cartoon", colorValue="blue")) %>%  
  setFocus(0)
```

setPosition

Set Position

Description

Set position for the representation

Usage

```
setPosition(NGLVieweR, x = 0, y = 0, z = 0)
```

Arguments

| | |
|-----------|---|
| NGLVieweR | A NGLVieweR object. |
| x | Position along the x-axis in angstroms. Default is 0. |
| y | Position along the y-axis in angstroms. Default is 0. |
| z | Position along the z-axis in angstroms. Default is 0. |

Value

NGLVieweR object with updated setPosition parameters.

See Also

- [setScale\(\)](#)
- [zoomMove\(\)](#)
- [setRotation\(\)](#)

Other transformations: [setRotation\(\)](#), [setScale\(\)](#), [zoomMove\(\)](#)

Examples

```
NGLViewer("7CID") %>%
stageParameters(backgroundColor = "white") %>%
addRepresentation("cartoon", param=list(name="cartoon", colorValue="red")) %>%
addRepresentation("ball+stick", param=list(name="ball+stick",
colorValue="yellow",
colorScheme="element",
sele="200")) %>%
setPosition(25, 0, 0)
```

setQuality

Set Quality

Description

Set Quality

Usage

```
setQuality(NGLViewer, quality = "medium")
```

Arguments

| | |
|-----------|--|
| NGLViewer | A NGLViewer object. |
| quality | Set rendering quality. Can be "low", "medium" (default) or "high". |

Value

setQuality parameter in NGLViewer htmlwidgets object.

See Also

Other options: [setFocus\(\)](#), [snapShot\(\)](#), [updateFocus\(\)](#), [updateFullscreen\(\)](#)

Examples

```
NGLViewer("7CID") %>%
addRepresentation("cartoon",
param=list(name="cartoon", colorValue="blue")) %>%
setQuality("medium")
```

| | |
|---------|-----------------|
| setRock | <i>Set rock</i> |
|---------|-----------------|

Description

Set rock animation

Usage

```
setRock(NGLVieweR, rock = TRUE)
```

Arguments

| | |
|-----------|---|
| NGLVieweR | A NGLVieweR object. |
| rock | If TRUE (default), start rocking and stop spinning. |

Value

setRock parameter to TRUE or FALSE in NGLVieweR htmlwidgets object.

See Also

- [setSpin\(\)](#)
- [updateRock\(\)](#)

Other animations: [setSpin\(\)](#), [updateRock\(\)](#), [updateSpin\(\)](#), [updateZoomMove\(\)](#)

Examples

```
NGLVieweR("7CID") %>%  
  addRepresentation("cartoon", param=list(name="cartoon", colorValue="blue")) %>%  
  setRock(TRUE)
```

| | |
|-------------|--------------------|
| setRotation | <i>Rotate View</i> |
|-------------|--------------------|

Description

Set rotation for the representation

Usage

```
setRotation(NGLVieweR, x = 0, y = 0, z = 0, degrees = TRUE)
```

Arguments

| | |
|-----------|--|
| NGLVieweR | A NGLVieweR object. |
| x | Rotation angle around the x-axis. Default is 0. |
| y | Rotation angle around the y-axis. Default is 0. |
| z | Rotation angle around the z-axis. Default is 0. |
| degrees | A logical value. If TRUE (default), the input angles are assumed to be in degrees and will be converted to radians. If FALSE, the angles are assumed to be in radians. |

Value

NGLVieweR object with updated rotateView parameters.

See Also

- [setScale\(\)](#)
- [zoomMove\(\)](#)
- [setPosition\(\)](#)

Other transformations: [setPosition\(\)](#), [setScale\(\)](#), [zoomMove\(\)](#)

Examples

```
NGLVieweR("7CID") %>%
stageParameters(backgroundColor = "white") %>%
addRepresentation("cartoon", param=list(name="cartoon", colorValue="red")) %>%
addRepresentation("ball+stick", param=list(name="ball+stick",
colorValue="yellow",
colorScheme="element",
sele="200")) %>%
setRotation(30, 45, 60, degrees = TRUE)
```

setScale

Set Scale

Description

Set the scale factor for the representation

Usage

```
setScale(NGLVieweR, scale = 1)
```

Arguments

| | |
|-----------|---|
| NGLVieweR | A NGLVieweR object. |
| scale | A numeric value indicating the scale factor (default is 1). |

Value

Updated NGLVieweR object with new scale parameter.

See Also

- [zoomMove\(\)](#)
- [setRotation\(\)](#)
- [setPosition\(\)](#)

Other transformations: [setPosition\(\)](#), [setRotation\(\)](#), [zoomMove\(\)](#)

Examples

```
NGLVieweR("7CID") %>%  
addRepresentation("cartoon",  
param=list(name="cartoon", colorValue="blue")) %>%  
setScale(2)
```

setSpin

Set Spin

Description

Set Spin animation

Usage

```
setSpin(NGLVieweR, spin = TRUE)
```

Arguments

| | |
|-----------|--|
| NGLVieweR | A NGLVieweR object. |
| spin | If TRUE (default), start spinning and stop rocking |

Value

setSpin parameter to TRUE or FALSE in NGLVieweR htmlwidgets object.

See Also

- [setRock\(\)](#)
- [updateSpin\(\)](#)

Other animations: [setRock\(\)](#), [updateRock\(\)](#), [updateSpin\(\)](#), [updateZoomMove\(\)](#)

Examples

```
NGLVieweR("7CID") %>%  
addRepresentation("cartoon", param=list(name="cartoon", colorValue="blue")) %>%  
setSpin(TRUE)
```

| | |
|--------------|----------------------|
| setSuperpose | <i>Set superpose</i> |
|--------------|----------------------|

Description

Enable or disable superposition of multiple structures, with options to specify the reference structure and selection strings for alignment.

Usage

```
setSuperpose(  
  NGLVieweR,  
  reference = 1,  
  sele_reference,  
  sele_target,  
  superpose = TRUE  
)
```

Arguments

| | |
|----------------|--|
| NGLVieweR | A NGLVieweR object. |
| reference | The index of the reference structure to align other structures to. Defaults to 1 (the first loaded structure). |
| sele_reference | Selection string for the reference structure, specifying which parts to align. Mandatory. |
| sele_target | Selection string for each target structure, specifying which parts to align. Mandatory. |
| superpose | Logical; if TRUE (default), enable superposition of multiple structures. Set to FALSE to disable. |

Value

Sets the superpose list in the NGLVieweR htmlwidgets object.

Examples

```
NGLVieweR("1GZM") %>%  
  addRepresentation("cartoon", param = list(color = "blue")) %>%  
  addStructure("1U19") %>%  
  addRepresentation("cartoon", param = list(color = "orange")) %>%  
  setSuperpose(  
    reference = 1,  
    sele_reference = ":A",  
    sele_target = ":A",  
    superpose = TRUE  
  )
```

 snapShot

Snapshot

Description

Make a snapshot of a NGLVieweR object in Shiny mode.

Usage

```
snapShot(NGLVieweR_proxy, fileName = "Snapshot", param = list())
```

Arguments

| | |
|-----------------|--|
| NGLVieweR_proxy | A NGLVieweR object. |
| fileName | Optional name for Snapshot (default = "Snapshot"). |
| param | Of type list, can be; antialias TRUE/FALSE, trim TRUE/FALSE, transparent TRUE/FALSE or scale numeric. For a full list of options, see "makeImage" and "ImageParameters" in the official NGL.js manual. |

Value

API call containing NGLVieweR id and list of message parameters.

See Also

[NGLVieweR_example\(\)](#) See example "snapshot".

Other options: [setFocus\(\)](#), [setQuality\(\)](#), [updateFocus\(\)](#), [updateFullscreen\(\)](#)

Examples

```
## Not run:
NGLVieweR_proxy("structure") %>%
snapShot("Snapshot", param = list(
  antialias = TRUE,
  trim = TRUE,
  transparent = TRUE,
  scale = 1))

## End(Not run)

if (interactive()) {
  library(shiny)

  ui <- fluidPage(
    titlePanel("Viewer with API inputs"),
    sidebarLayout(
      sidebarPanel(
```

```

        actionButton("snapshot", "Snapshot"),
      ),
      mainPanel(
        NGLViewerOutput("structure")
      )
    )
  )
  server <- function(input, output) {
    output$structure <- renderNGLViewer({
      NGLViewer("7CID") %>%
        addRepresentation("cartoon",
          param = list(
            name = "cartoon",
            color = "residueindex"
          )
        )
    })
    observeEvent(input$snapshot, {
      NGLViewer_proxy("structure") %>%
        snapShot("Snapshot",
          param = list(
            antialias = TRUE,
            trim = TRUE,
            transparent = TRUE,
            scale = 1
          )
        )
    })
  }
  shinyApp(ui, server)
}

```

| | |
|-----------------|-----------------------------|
| stageParameters | <i>Set stage parameters</i> |
|-----------------|-----------------------------|

Description

Set stage parameters.

Usage

```
stageParameters(NGLViewer, ...)
```

Arguments

| | |
|-----------|---|
| NGLViewer | A NGLViewer object. |
| ... | Options controlling the stage. Most common options are <code>backgroundColor</code> , <code>rotateSpeed</code> , <code>zoomSpeed</code> , <code>hoverTimeout</code> and <code>lightIntensity</code> . For a full list of options, see the "stageParameters" method in the official NGL.js manual. |

Value

Returns list of stage parameters to NGLVieweR htmlwidgets object.

See Also

- [updateStage\(\)](#)
- [NGLVieweR_example\(\)](#) See example "basic".

Examples

```

NGLVieweR("7CID") %>%
  stageParameters(backgroundColor = "white", zoomSpeed = 1) %>%
  addRepresentation("cartoon", param = list(name = "cartoon", colorScheme="residueindex"))

if (interactive()) {
  library(shiny)
  ui <- fluidPage(NGLVieweROutput("structure"))
  server <- function(input, output) {
    output$structure <- renderNGLVieweR({
      NGLVieweR("7CID") %>%
        stageParameters(backgroundColor = "white", zoomSpeed = 1) %>%
        addRepresentation("cartoon",
          param = list(name = "cartoon", colorScheme = "residueindex")
        )
    })
  }
  shinyApp(ui, server)
}

```

updateColor

Update color of a selection

Description

Update color of an existing NGLVieweR selection in Shiny mode.

Usage

```
updateColor(NGLVieweR_proxy, name, color)
```

Arguments

| | |
|-----------------|--|
| NGLVieweR_proxy | A NGLVieweR object. |
| name | Name of selection to alter the color. |
| color | Can be a colorValue (color name or HEX code) or colorScheme (e.g. "element", "resname", "random" or "residueindex"). For a full list of options, see the "Colormaker" section in the official NGL.js manual. |

Value

API call containing NGLViewer id and list of message parameters.

See Also

- [NGLViewer_example\(\)](#) See example "updateColor".

Other updates: [updateRepresentation\(\)](#), [updateStage\(\)](#), [updateVisibility\(\)](#)

Examples

```
## Not run:
NGLViewer_proxy("structure") %>%
  updateColor("cartoon", "red")

## End(Not run)

if (interactive()) {
  library(shiny)
  library(colourpicker)

  ui <- fluidPage(
    titlePanel("Viewer with API inputs"),
    sidebarLayout(
      sidebarPanel(
        colourInput("color", "red", "red"),
        actionButton("update", "Update"),
      ),
      mainPanel(
        NGLViewerOutput("structure")
      )
    )
  )
  server <- function(input, output) {
    output$structure <- renderNGLViewer({
      NGLViewer("7CID") %>%
        addRepresentation("cartoon",
          param = list(name = "cartoon", color = "residueindex")
        )
    })
    observeEvent(input$update, {
      NGLViewer_proxy("structure") %>%
        updateColor("cartoon", isolate(input$color))
    })
  }
  shinyApp(ui, server)
}
```

`updateFocus`*Update Focus*

Description

Update the focus of an existing NGLVieweR object in Shiny mode.

Usage

```
updateFocus(NGLVieweR_proxy, focus = 0)
```

Arguments

| | |
|-----------------|--|
| NGLVieweR_proxy | A NGLVieweR object. |
| focus | Numeric value between 0-100 (default = 0). |

Value

API call containing NGLVieweR id and list of message parameters.

See Also

- [setFocus\(\)](#)
- [NGLVieweR_example\(\)](#) See example "updateFocus".

Other options: [setFocus\(\)](#), [setQuality\(\)](#), [snapShot\(\)](#), [updateFullscreen\(\)](#)

Examples

```
## Not run:
NGLVieweR_proxy("structure") %>%
  updateFocus(focus = 50)

## End(Not run)

if (interactive()) {
  library(shiny)
  ui = fluidPage(
    titlePanel("Viewer with API inputs"),
    sidebarLayout(
      sidebarPanel(
        sliderInput("focus", "Focus", 0, 100, 50)
      ),
      mainPanel(
        NGLVieweROutput("structure")
      )
    )
  )
}
```

```
server = function(input, output) {
  output$structure <- renderNGLViewer({
    NGLViewer("7CID") %>%
      addRepresentation("cartoon",
        param = list(name = "cartoon", color= "red"))
  })
  observeEvent(input$focus, {
    NGLViewer_proxy("structure") %>%
      updateFocus(input$focus)
  })
}
shinyApp(ui, server)
}
```

| | |
|------------------|-------------------|
| updateFullscreen | <i>Fullscreen</i> |
|------------------|-------------------|

Description

Put viewer in fullscreen. Works in Shiny mode.

Usage

```
updateFullscreen(NGLViewer_proxy, fullscreen = TRUE)
```

Arguments

| | |
|-----------------|-----------------------------------|
| NGLViewer_proxy | A NGLViewer object. |
| fullscreen | If TRUE put viewer in fullscreen. |

Value

API call containing NGLViewer id and list of message parameters.

See Also

[NGLViewer_example\(\)](#) See example "updateFullscreen".
Other options: [setFocus\(\)](#), [setQuality\(\)](#), [snapShot\(\)](#), [updateFocus\(\)](#)

Examples

```
## Not run:
NGLViewer_proxy("structure") %>% updateFullscreen()

## End(Not run)

if (interactive()) {
  library(shiny)
```

```

ui <- fluidPage(
  titlePanel("Viewer with API inputs"),
  sidebarLayout(
    sidebarPanel(
      actionButton("fullscreen", "Fullscreen"),
    ),
    mainPanel(
      NGLViewROutput("structure")
    )
  )
)
server = function(input, output) {
  output$structure <- renderNGLViewR({
    NGLViewR("7CID") %>%
      addRepresentation("cartoon",
        param = list(name = "cartoon", color = "red")
      )
  })

  observeEvent(input$fullscreen, {
    NGLViewR_proxy("structure") %>%
      updateFullscreen()
  })
}
shinyApp(ui, server)
}

```

updateRepresentation *Update Representation*

Description

Update an existing NGLViewR representation in Shiny mode.

Usage

```
updateRepresentation(NGLViewR_proxy, name, param = list())
```

Arguments

| | |
|----------------|--|
| NGLViewR_proxy | A NGLViewR object. |
| name | Name of representation to alter the color. |
| param | Options for the different types of representations. Most common options are name, opacity, colorScheme, colorValue and visibility. For a full list of options, see the general "RepresentationParameters" method and type specific Label-, Structure- and Surface- RepresentationParameters in the official NGL.js manual. |

Value

API call containing NGLViewer id and list of message parameters.

See Also

- [addSelection\(\)](#) Add a new selection to a NGLViewer object.
- [addRepresentation\(\)](#)
- [NGLViewer_example\(\)](#) See example "updateRepresentation".

Other updates: [updateColor\(\)](#), [updateStage\(\)](#), [updateVisibility\(\)](#)

Examples

```
## Not run:
NGLViewer_proxy("structure") %>%
  updateRepresentation("cartoon",
    param = list(
      name = "cartoon",
      color = isolate(input$color),
      opacity = isolate(input$opacity)
    )
  )

## End(Not run)

if (interactive()) {
  library(shiny)

  ui = fluidPage(
    titlePanel("Viewer with API inputs"),
    sidebarLayout(
      sidebarPanel(
        selectInput("color", "Color", c("red", "white", "blue")),
        sliderInput("opacity", "Opacity", 0, 1, 1),
        actionButton("update", "Update"),
      ),
      mainPanel(
        NGLViewerOutput("structure")
      )
    )
  )
  server = function(input, output) {
    output$structure <- renderNGLViewer({

          param = list(
            color = isolate(input$color),
```

```

        opacity = isolate(input$opacity)
      )
    }
  }
  shinyApp(ui, server)
}

```

updateRock

Update Rock

Description

Start rock animation and stop spinning. Works on an existing NGLVieweR object in Shiny mode.

Usage

```
updateRock(NGLVieweR_proxy, rock = TRUE)
```

Arguments

NGLVieweR_proxy

A NGLVieweR object.

rock

If TRUE (default), start rocking and stop spinning.

Value

API call containing NGLVieweR id and list of message parameters.

See Also

- [setRock\(\)](#)
- [NGLVieweR_example\(\)](#) See example "updateAnimation".

Other animations: [setRock\(\)](#), [setSpin\(\)](#), [updateSpin\(\)](#), [updateZoomMove\(\)](#)

Examples

```

## Not run:
NGLVieweR_proxy("structure") %>% updateRock(TRUE)

## End(Not run)

if (interactive()) {
  library(shiny)

  ui = fluidPage(
    titlePanel("Viewer with API inputs"),
    sidebarLayout(

```

```

    sidebarPanel(
      radioButtons("animate", label = "Animation",
        choices = c("None", "Spin", "Rock"), selected = "None")
    ),
    mainPanel(
      NGLViewROutput("structure")
    )
  )
)
server = function(input, output) {

        updateRock(FALSE) %>%
        updateSpin(FALSE)
    }
  })
}
shinyApp(ui, server)
}

```

updateSelection

Update a selection

Description

Update the selected residues of an existing NGLViewR selection in

Usage

```
updateSelection(NGLViewR_proxy, name = name, sele = "none")
```

Arguments

| | |
|----------------|--|
| NGLViewR_proxy | A NGLViewR object. |
| name | Name of selection. |
| sele | Selected atoms/residues. See the section "selection-language" in the official NGL.js manual. |

Value

API call containing NGLViewer id and list of message parameters.

See Also

- [NGLViewer_example\(\)](#) See example "updateSelection".

Other selections: [addSelection\(\)](#), [removeSelection\(\)](#)

Examples

```
## Not run:
NGLViewer_proxy("structure") %>%
  updateSelection("ball+stick", sele = "1-20")

## End(Not run)

if (interactive()) {
  library(shiny)
  ui <- fluidPage(
    titlePanel("Viewer with API inputs"),

            name = "ball+stick",
            colorValue = "yellow",
            colorScheme = "element",
            sele = "1-20"
          )
        )
    })
    observeEvent(input$update, {
      NGLViewer_proxy("structure") %>%
        updateSelection("ball+stick", sele = isolate(input$selection))
    })
  }
  shinyApp(ui, server)
}
```

| | |
|------------|--------------------|
| updateSpin | <i>Update Spin</i> |
|------------|--------------------|

Description

Start spin animation and stop rocking. Works on an existing NGLVieweR object in Shiny mode.

Usage

```
updateSpin(NGLVieweR_proxy, spin = TRUE)
```

Arguments

| | |
|-----------------|---|
| NGLVieweR_proxy | A NGLVieweR object. |
| spin | If TRUE (default), start spinning and stop rocking. |

Value

API call containing NGLVieweR id and list of message parameters.

See Also

- [setSpin\(\)](#)
- [NGLVieweR_example\(\)](#) See example "updateAnimation".

Other animations: [setRock\(\)](#), [setSpin\(\)](#), [updateRock\(\)](#), [updateZoomMove\(\)](#)

Examples

```
## Not run:
NGLVieweR_proxy("structure") %>% updateRock(TRUE)

## End(Not run)
if (interactive()) {
  library(shiny)

        updateRock(FALSE) %>%
        updateSpin(FALSE)
    }
  })
}
shinyApp(ui, server)
}

```

updateStage

Update Stage

Description

Update an existing NGLViewer stage in Shiny mode.

Usage

```
updateStage(NGLViewer_proxy, param = list())
```

Arguments

| | |
|-----------------|---|
| NGLViewer_proxy | A NGLViewer object. |
| param | Of type list. Most common options are backgroundColor, rotateSpeed, zoomSpeed, hoverTimeout and lightIntensity. For a full list of options, see the "StageParameters" method in the official NGL.js manual. |

Value

API call containing NGLViewer id and list of message parameters.

See Also

- [stageParameters\(\)](#)
- [NGLViewer_example\(\)](#) See example "updateStage".

Other updates: [updateColor\(\)](#), [updateRepresentation\(\)](#), [updateVisibility\(\)](#)

Examples

```
## Not run:
NGLViewer("7CID") %>%

        )
    })
  }
  shinyApp(ui, server)
}
```

| | |
|------------------|--------------------------|
| updateVisibility | <i>Update visibility</i> |
|------------------|--------------------------|

Description

Hide or show an existing NGLVieweR selection in Shiny mode.

Usage

```
updateVisibility(NGLVieweR_proxy, name, value = FALSE)
```

Arguments

| | |
|-----------------|--|
| NGLVieweR_proxy | A NGLVieweR object. |
| name | Name of selection to alter the color. |
| value | Hide FALSE or show TRUE selection. For a full description see "setVisibility" in the official NGL.js manual. |

Value

API call containing NGLVieweR id and list of message parameters.

See Also

[NGLVieweR_example\(\)](#) See example "updateVisibility".

Other updates: [updateColor\(\)](#), [updateRepresentation\(\)](#), [updateStage\(\)](#)

Examples

```
## Not run:
NGLVieweR_proxy("structure") %>%
  updateVisibility("cartoon", value = TRUE)

## End(Not run)

if (interactive()) {
  library(shiny)

  ui = fluidPage(
    titlePanel("Viewer with API inputs"),
    sidebarLayout(
      sidebarPanel(
        actionButton("show", "Show"),
        actionButton("hide", "Hide"),
      ),
      mainPanel(
        NGLVieweROutput("structure")
      )
    )
  )
}
```

```

    )
  )
)
server = function(input, output) {
  output$structure <- renderNGLViewer({
    NGLViewer("7CID") %>%
      addRepresentation("cartoon",
        param = list(name = "cartoon", color="residueindex"))
  })
  observeEvent(input$show, {
    NGLViewer_proxy("structure") %>%
      updateVisibility("cartoon", value = TRUE)
  })
  observeEvent(input$hide, {

      updateVisibility("cartoon", value = FALSE)
  })
}
shinyApp(ui, server)
}

```

updateZoomMove

Update zoomMove

Description

Add a zoom animation on an existing NGLViewer object.

Usage

```

updateZoomMove(
  NGLViewer_proxy,
  center,
  zoom,
  duration = 0,
  z_offSet = 0,
  structureIndex = NULL
)

```

Arguments

| | |
|-----------------|---|
| NGLViewer_proxy | A NGLViewer object. |
| center | Target distance of selected atoms/residues. See the section "selection-language" in the official NGL.js manual. |
| zoom | Target zoom of selected atoms/residues. See the section "selection-language" in the official NGL.js manual. |

| | |
|----------------|---|
| duration | Optional animation time in milliseconds (default = 0). |
| z_offSet | Optional zoom offset value (default = 0). |
| structureIndex | Optional index of the structure to target for the zoom animation. If NULL (default), the first structure (index 0) is targeted. |

Value

API call containing NGLViewer id and list of message parameters.

  shinyApp(ui, server)
}

```

 zoomMove

Set zoomMove

Description

Add a zoom animation

Usage

```
zoomMove(NGLVieweR, center, zoom, duration = 0, z_offSet = 0)
```

Arguments

| | |
|-----------|---|
| NGLVieweR | A NGLVieweR object. |
| center | Target distance of selected atoms/residues. See the section "selection-language" in the official NGL.js manual. |
| zoom | Target zoom of selected atoms/residues. See the section "selection-language" in the official NGL.js manual. |
| duration | Optional animation time in milliseconds (default = 0). |
| z_offSet | Optional zoom offset value (default = 0). |

Value

List of zoomMove parameters to NGLVieweR htmlwidgets object.
