Package: PSGD (via r-universe)

October 21, 2024

Type Package

Title Projected Subset Gradient Descent

Version 1.0.3

Date 2023-04-24

Maintainer Anthony Christidis <anthony.christidis@stat.ubc.ca>

Description Functions to generate ensembles of generalized linear models using a greedy projected subset gradient descent algorithm. The sparsity and diversity tuning parameters are selected by cross-validation.

License GPL (>= 2)

Biarch true

LinkingTo Rcpp, RcppArmadillo

RoxygenNote 7.1.1

Imports Rcpp (>= 1.0.7)

Suggests testthat, mvnfast

NeedsCompilation yes

coef.cv.PSGD *Coefficients for cv.PSGD Object*

Description

coef.cv.PSGD returns the coefficients for a cv.PSGD object.

Usage

```
## S3 method for class 'cv.PSGD'
coef(object, group_index = NULL, ...)
```

Arguments

object	An object of class cv.PSGD
group_index	Groups included in the ensemble. Default setting includes all the groups.
...	Additional arguments for compatibility.

Value

The coefficients for the cv.PSGD object.

Author(s)

Anthony-Alexander Christidis, <anthony.christidis@stat.ubc.ca>

```

`coef.PSGD` *Coefficients for PSGD Object*

Description

`coef.PSGD` returns the coefficients for a PSGD object.

Usage

```
## S3 method for class 'PSGD'
coef(object, group_index = NULL, ...)
```

Arguments

`object`	An object of class PSGD.
`group_index`	Groups included in the ensemble. Default setting includes all the groups.
`...`	Additional arguments for compatibility.

Value

The coefficients for the PSGD object.

cv.PSGD *Cross-Validation - Projected Subset Gradient Descent*

Description

cv.PSGD performs the CV procedure for a projected subset gradient descent algorithm.

Usage

```
cv.PSGD(
  x,
  y,
  n_models,
  model_type = c("Linear", "Logistic")[1],
  include_intercept = TRUE,
  split_grid,
  size_grid,
  max_iter = 100,
  cycling_iter = 5,
  n_folds = 5,
  n_threads = 1
)
```

Arguments

x	Design matrix.
y	Response vector.
n_models	Number of models into which the variables are split.
model_type	Model type. Must be one of "Linear or Logistic". Default is "Linear".
include_intercept	TRUE or FALSE parameter for the inclusion of an intercept term. Default is TRUE.
split_grid	Grid for number of models that may share a variable.
size_grid	Grid for number of variables that a model may have.
max_iter	Maximum number of iterations in PSGD algorithm.
cycling_iter	Number of random cycling permutations.
n_folds	Number of cross-validation folds. Default is 5
n_threads	Number of threads. Default is 1.

Value

An object of class cv.PSGD

Author(s)

Anthony-Alexander Christidis, <anthony.christidis@stat.ubc.ca>

predict.cv.PSGD *Predictions for cv.PSGD Object*

Description

predict.cv.PSGD returns the predictions for a cv.PSGD object.

Usage

```
## S3 method for class 'cv.PSGD'
predict(object, newx, group_index = group_index, ...)
```

Arguments

object	An object of class cv.PSGD
newx	New data for predictions.
group_index	Groups included in the ensemble. Default setting includes all the groups.
...	Additional arguments for compatibility.

Value

The predictions for the cv.PSGD object.

`predict.PSGD` *Predictions for PSGD Object*

Description

`predict.PSGD` returns the predictions for a PSGD object.

Usage

```
## S3 method for class 'PSGD'
predict(object, newx, group_index = NULL, ...)
```

Arguments

`object`	An object of class PSGD
`newx`	New data for predictions.

group_index	Groups included in the ensemble. Default setting includes all the groups.
...	Additional arguments for compatibility.

Value

The predictions for the PSGD object.
