

Package: SGPdata (via r-universe)

September 14, 2024

Type Package

Title Exemplar Data Sets for Student Growth Percentiles (SGP) Analyses

Version 28.0-0.0

Date 2024-7-14

Maintainer Damian W. Betebenner <dbetebenner@nciea.org>

Depends R (>= 4.0)

Suggests SGP (>= 1.9-0.0), knitr, rmarkdown

Imports crayon, data.table (>= 1.14.0)

Description Data sets utilized by the 'SGP' package as exemplars for users to conduct their own student growth percentiles (SGP) analyses.

SGPdata-package	<i>Exemplar Data Sets for Student Growth Percentile (SGP) Analyses</i>
-----------------	--

Description

The 'SGPdata' package contains five exemplar data sets utilized by the 'SGP' package for testing and examples.

Details

Package:	SGPdata
Type:	Package
Version:	28.0-0.0
Date:	2024-7-14
License:	GPL-3
LazyLoad:	Yes
LazyData:	Yes

sgpData	<i>Longitudinal Student Assessment Data</i>
---------	---

Description

A dataset comprising a subset of five years of state assessment reading data suitable for student growth percentile and percentile growth projection/trajectory analyses. The dataset is used in examples provided in the documentation for the `studentGrowthPercentiles` and `studentGrowthProjections` functions, and serves as an exemplar for user construction of their own datasets for growth percentile analyses.

Format

A data frame of student level observations for five years on the following variables.

ID Student ID
GRADE_2020 Student Grade Tested 2020, possibly missing
GRADE_2021 Student Grade Tested 2021, possibly missing
GRADE_2022 Student Grade Tested 2022, possibly missing
GRADE_2023 Student Grade Tested 2023, possibly missing
GRADE_2024 Student Grade Tested 2024, possibly missing
SS_2020 Student Scale Score 2020, possibly missing
SS_2021 Student Scale Score 2021, possibly missing
SS_2022 Student Scale Score 2022, possibly missing
SS_2023 Student Scale Score 2023, possibly missing
SS_2024 Student Scale Score 2024, possibly missing

Note

All datasets used with `studentGrowthPercentiles` and `studentGrowthProjections` must be specifically formatted as *wide* format files. The first variable/column is the student ID variable. The next set of columns provide the grade of the student across all the years provided in the dataset (possibly missing). The last set of columns provide the scales scores of the student in the respective grades. Multi-year operational analyses benefit from putting data in long format. See `sgpData_LONG` and associated documentation for a comprehensive account.

sgpData_INSTRUCTOR_NUMBER

*Lookup table associating INSTRUCTOR_NUMBER with student ID
by YEAR and CONTENT_AREA*

Description

A lookup table comprising student IDs associated with INSTRUCTOR_NUMBER a subset of five years of state assessment reading and mathematics data suitable for student growth percentile and percentile growth projection/trajectory analyses. The dataset is in LONG format with each record representing a unique teacher by student by year by content area combination.

Format

A data frame of student level observations for five years and two content areas for the following variables.

ID Unique Student Identification Number

CONTENT_AREA Content area for student/teacher record (Reading or Mathematics)

YEAR Year for student/teacher record

INSTRUCTOR_NUMBER Unique instructor number identifier

INSTRUCTOR_LAST_NAME Instructor last name

INSTRUCTOR_FIRST_NAME Instructor first name

INSTRUCTOR_WEIGHT Proportional weight associated with student/teacher record

INSTRUCTOR_ENROLLMENT_STATUS Indicator of full enrollment status of student with teacher

Longitudinal Student Assessment Data in LONG format

Description

A dataset comprising a subset of five years of state assessment reading and mathematics data suitable for student growth percentile (SGP) and percentile growth projection/trajectory analyses. The dataset is in LONG format with each record representing a unique student, by year by content area combination. The example data is used in examples and illustration in the enclosed documentation to show how SGPs can be operationalized across years with the results being used to produce a variety of high quality visualizations both at the aggregate (e.g., school) and individual level.

Format

A data frame of student level observations for five years and two content areas for the following variables.

ID Unique Student Identification Number

LAST_NAME Student last name

FIRST_NAME Student first name

CONTENT_AREA Content area for student observation (Reading or Mathematics)

YEAR Year for student observation

GRADE Grade level of student observation

SCALE_SCORE Student Scale Score
ACHIEVEMENT_LEVEL Achievement level associated with student scale score
GENDER Student gender
ETHNICITY Student ethnicity
FREE_REDUCED_LUNCH_STATUS Student free/reduced lunch status
ELL_STATUS Student English Language Learner status
IEP_STATUS Student Individual Education Plan status
GIFTED_AND_TALENTED_PROGRAM_STATUS Student Gifted and Talented Program status
SCHOOL_NUMBER School number associated with student record
SCHOOL_NAME School name associated with school number and student record
EMH_LEVEL Elementary, Middle, High school indicator for school attended
DISTRICT_NUMBER District number associated with student record
DISTRICT_NAME District name associated with school number and student record
SCHOOL_ENROLLMENT_STATUS Indicator of full academic year student enrollment in school
DISTRICT_ENROLLMENT_STATUS Indicator of full academic year student enrollment in school
STATE_ENROLLMENT_STATUS Indicator of full academic year student enrollment in school
VALID_CASE Indicator of whether the case is valid or invalid

Note

All datasets used with `studentGrowthPercentiles` and `studentGrowthProjections` must be specifically formatted as *wide* format files. The first variable/column is the student ID variable. The next set of columns provide the grade of the student across all the years provided in the dataset (possibly missing). The last set of columns provide the scales scores of the student in the respective grades. Operational users of this package are advised to use data formatted similar to the `sgpData_LONG` with the higher level functions `prepareSGP`, `analyzeSGP`, `combineSGP`, `summarizeSGP`, `visualizeSGP`, and `outputSGP`

sgpData_LONG_COVID	<i>Longitudinal Student Assessment Data in LONG format with COVID-19 2020 interruption</i>
--------------------	--

Description

A dataset comprising a subset of seven years of state assessment ELA and mathematics data across an 8 year span suitable for student growth percentile (SGP) and percentile growth projection/trajectory analyses. The dataset is missing 2020 data to help users model COVID related interruptions to student growth. The dataset is in LONG format with each record representing a unique student, by year by content area combination. The example data is used in examples and illustration in the enclosed documentation to show how SGPs can be operationalized across years with the results being used to produce a variety of high quality visualizations both at the aggregate (e.g., school) and individual level.

Format

A data frame of student level observations for seven years (across an 8 year span) and two content areas for the following variables.

VALID_CASE Indicator of whether the case is valid or invalid

CONTENT_AREA Content area for student observation (ELA or Mathematics)

YEAR Year for student observation

ID Unique Student Identification Number

IEP_STATUS Student Individual Education Plan status

GRADE Grade level of student observation

SCALE_SCORE Student Scale Score

SCALE_SCORE_without_COVID_IMPACT Student Scale Score without COVID impact. Original scale score

ACHIEVEMENT_LEVEL Achievement level associated with student scale score

ETHNICITY Student ethnicity

FREE_REDUCED_LUNCH_STATUS Student free/reduced lunch status

ELL_STATUS Student English Language Learner status

GENDER Student gender

SCHOOL_NUMBER School number associated with student record

SCHOOL_NAME School name associated with school number and student record

DISTRICT_NUMBER District number associated with student record

DISTRICT_NAME District name associated with school number and student record

Note

All datasets used with `studentGrowthPercentiles` and `studentGrowthProjections` must be specifically formatted as *wide* format files. The first variable/column is the student ID variable. The next set of columns provide the grade of the student across all the years provided in the dataset (possibly missing). The last set of columns provide the scales scores of the student in the respective grades. Operational users of this package are advised to use data formatted similar to the `sgpData_LONG_COVID` with the higher level functions `prepareSGP`, `analyzeSGP`, `combineSGP`, `summarizeSGP`, `visualizeSGP`, and `outputSGP`

sgptData_LONG	<i>Longitudinal Student Assessment Data in LONG format with DATE for SGPt analyses.</i>
---------------	---

Description

A dataset comprising a subset of 3 years (and time periods) of interim assessment early literacy, reading and mathematics data suitable for time dependent student growth percentile (SGPt) and percentile growth projection/trajectory analyses. The dataset is in LONG format with each record representing a unique student, by year/time period by content area combination. The example data is used in examples and illustrations in the enclosed documentation to show how SGPTs can be operationalized across years with the results being used to produce a variety of high quality visualizations both at the aggregate (e.g., school) and individual level.

Format

A data frame of student level observations for five years and two content areas for the following variables.

COUNTRY Variable indicating the COUNTRY associated with test record.

STATE State associated with the test record.

VALID_CASE VALID_CASE variable.

CONTENT_AREA Variable indicating content area associated with test record.

YEAR Variable indicating the year associated with the test record.

DATE Variable indicating the year associated with the test record: Must be in YYYY-MM-DD format.

ID Unique student identifier associated with test record.

GRADE Variable indicating the grade associated with the test record.

SCALE_SCORE Variable providing the scale score associated with the test record.

SCALE_SCORE_RASCH Variable providing the Rasch score associated with the test record.

SEM Variable indicating the standard error of measurement associated with the scale score.

ACHIEVEMENT_LEVEL Variable indicating the achievement level associated with the scale score.
