**Title** Fast Multidimensional Entropy Estimation by k-d Partitioning

**Version** 1.0.0

**Description** Estimate entropy of multidimensional data set.

**License** GPL (>= 3)

**Imports** checkmate

**Encoding** UTF-8

**RoxygenNote** 7.1.1

**NeedsCompilation** yes

**Author** Olaf Mersmann [aut, cre]

kdpee	<i>Fast Entropy Estimation of Multi-Dimensional Data</i>
-------	--

---

## Description

Non-parametric estimator for the differential entropy of a multidimensional distribution, given a limited set of data points, by a recursive rectilinear partitioning.

## Usage

```
kdpee(X, ci = 0.95, lower = apply(X, 2, min), upper = apply(X, 2, max))
```

**Arguments**

<code>X</code>	<code>[matrix]</code> Data, one observation per row.
<code>ci</code>	<code>[numeric(1)]</code> Confidence threshold used to decide if a cell should be divided further. Defaults to 95%.
<code>lower</code>	<code>[numeric(n)]</code> Lower bound of the support of $X$ .
<code>upper</code>	<code>[numeric(n)]</code> Upper bound of the support of $X$ .

**Value**

Differential entropy estimate.

D. Stowell and M. D. Plumbley Fast multidimensional entropy estimation by k-d partitioning. *IEEE Signal Processing Letters* 16 (6), 537–540, June 2009. <http://dx.doi.org/10.1109/LSP.2009.2017346>

**Examples**

```
Xu <- matrix(runif(1000 * 100), ncol=100)
kdpee(Xu)

Xn <- matrix(rnorm(1000 * 100), ncol=100)
kdpee(Xn)
```
